                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (R75026-47). Of the spacer region, the most important residues are Asn 172, Val 173, Lys 174 and Gly 175, with Val 173 being the most important of these. The shedding of the receptor is independent of the side chain identity of these residues, with the exception of a limited dependence on the identity of Val 173. Mutations which alter the conformation of the protein adversely effect the shedding process. The mutations shown in R75013-47 were introduced in order to create an inhibitor of a protease that is capable of cleaving the soluble TMP-R from the cell bound TMF-R. Fragments of these inhibitors can be seen in R75017-9, R75033-5 and R75042-3. These protease inhibitors can be used for enhancing TMF function.
                                                                                                                                                                                                                 Sg
                                                                                                                                                                                                                                                             Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   464
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            436
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             344
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           376

raTNF-R8 (Q06284) was used to screen the HS913T cDNA library.

LambdaTNF-R2 encodes the complete human TNF-R2 and was used to construct a plasmid (pADTNF-R) expressing the product the same as pADTNF-BP (see Q06282).

The Tumour Necrosis Factor Binding Protein I is the soluble form c type I TNF-receptor and constitutes a fragment of the cell surface form of this receptor, corresp. to its extracellular domain. There is no characteristic poly(A) addition signal near the 3' end of the cDNA. The sequence ACTAAA (tag m) may serve as an alternative to this signal, but with low efficiency. See also Q12212-15.

Improved process for the selection of recombinant host cells promoved process for the selection of recombinant host cells process for the selection of recombinant host cells conty. A DNA construct comprising a selectable gene cells conty. A DNA construct comprising a selectable gene process from the cytomegalovirus immediate-early gene, a cells conty region conty. A dicistronic vector (T19930) comprises a regulatory region contyped from the cytomegalovirus immediate-early gene, a celectable dihydrofolate reductase gene positioned within an control having a 5' wild-type ras splice donor site, a downstream control having a 5' wild-type ras splice donor site, a downstream control having a 5' wild-type ras splice donor site, a downstream control having a 5' wild-type ras splice donor and control for the control for an immunoadhesin, Therigg, capable of binding control necrosis factor, and a poly-A sequence. Transfection of CHO CC Unfor cells in nutrient-rich medium gave Therigg in yields of 9.5 cu yml (15-fold higher compared to conventional vector amplified
                                                                                                                                                                                                                                           Query Match

Claim 2; Figure 1; 17pp; English.

Modification of the tumour necrosis factor receptor by mutation deletion modulates signal transduction and/or cleavage effected the receptor. This modulation of activity can also be achieved using effector proteins which interact with the TNF receptor.

Molecules which interact with the TNF receptor or the effector proteins can be used to treat or prevent diseases associated with the TNF activity e.g. autoimmune disease; rheumatoid arthritis; graft rejection; graft vs. host disease or septic shock. They can also be used to treat overdoses of exogenous TNF.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence encodes the designed TNF-alpha 55kD receptor derivative, as present in pTNFRecd. This was produced as described 024441. This derivative lacks the 81 carboxyl terminal residues of the cytoplasmic domain. The derivative could be used in the regulation of TNF-alpha mediated responses by binding and sequestering human TNF-alpha e.g. in the treatment of pulmonary diseases, septic shock, HIV infection, malaria, viral meningitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    18-OCT-1991; G01826.

                                                                                                                                                                                                                                                                                     PT New polyceptide capable of binding human TNF alpha - comprises
profirst three cysteine-rich subdomains of TNF alpha receptor for
profirst three cysteine-rich subdomains of TNF alpha receptor for
profirst three cysteine-rich subdomains of TNF alpha receptor
profirst sequence encodes the designed TNF-alpha 55kD receptor
This sequence encodes the designed TNF-alpha 5kD receptor
Cloning of the BgliI/HindIII digested product of a pcR using
Cloning of the BgliI/HindIII digested product of a pcR using
Cloning of the BgliI/HindIII 5'-deltaCla. This introduced
Ca termination codon after amino acid 167, to yield pdeltaIV.
CT his derivative lacks the membrane proximal 4th subdomain, yet
CT retains the ability to bind TNF-alpha with high affinity
C (lopower8 - lopower9 Mpower-1) The deriv. can be used in the
C regulation of TNF-alpha mediated responses by binding and
C sequestering human TNF-alpha e.g. in the treatment of pulmonary
C diseases, septic shock, HIV infection, malaria, viral meningitis,
C graft versus host disease and autolmmune diseases, esp. rheumatoid

                                                                                                                                                                                                                                                                          treating autoimmune disease, septic shock, HIV etc.

Example: Fig 8: 43pp: English.

This sequence encodes the designed TNF-alpha 55kD receptor derivative, as present in pdeltaI. This construct was generated by joining PCR fragments by means of overlaps introduced into the primers used for PCR. Gel purified products of PCR's using 5'Cla, IA, IB, and 5D primers were mixed and subjected to further amplification using 5'Cla and 5D as primers. The resulting fragment was digested with ClaI and BgIII and cloned into ClaI/BgIII digested pTNFRecd, to yield pdeltaI, containing the sequence given. This derivative could be used to regulate TNF-alpha mediated responses by binding and sequestering human TNF-alpha e.g. in the treatment of pulmonary diseases, septic shock, HIV infection, malaria, viral meningitis, graft versus host disease and autoimmune diseases, esp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 30-APR-1992.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δÃ
                                   Example 2; Columns 25-28; 24pp; English.

A claimed transgenic mouse expresses, in its intestinal epithelial cells, the enzyme human GDP-1-fucose:beta-D-galactoside 2-alpha-1-cells, the enzyme human GDP-1-fucose:beta-D-yalactoside 2-alpha-1-cells, the enzyme (also called alpha 1, 2 FT) or human GDP-1-fucose: beta-D-N-acetylglucosamide 3/4-alpha-1-fucosyltransferase (also called alpha 1, 3/4 FT). The enzyme is expressed under the control of a gut epithelial cell-specific promoter and Helicobacter pylori adheres to the transgenic cells. The transgenic mouse and intestinal epithelial cells from it are useful as models for screening compounds for the ability to inhibit adhesion of H. pylori to gut epithelial cells. The first 617 nucleotides of the present chimeric sequence encode the promoter from rat liver fatty acid binding protein (Fabpl) which can direct foreign gene expression to the pit cell lineage of the mouse gastric epithelium, to proliferating and non-proliferating cells in intestinal crypts, as well as to the four principal differentiated cell lineages along the crypt-to-villus axis of the small intestine. The remainder of the chimeric sequence corresponds to exon 1 of the human growth hormone (hGH) gene, into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        15-SEP-1997 (first entry)

                                                                                                                                                                                                                                                                                                        inserted. No hGH will be produced because the initiator Met codon and the first translation stop codon will be from the hFT sequence and there is no ribosome re-entry sequence. The hGH exon 1 ensures efficient splicing of the transgene primary transcript, improves stability of the cytoplasmic hFT mRNA and allows transgene expression to be monitored by in situ hybridisation using a digoxigenin-labelled hGH oligonucleotide.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Hybrid dimeric protein comprising two co-expressed units - each based on receptor or ligand and a subunit of a heterodimeric hormone, especially FSH, for inducing follicular maturation Example; Pages 32-3; 60pp; English.

A novel fusion protein comprises 2 dimer forming co-expressed amino acid sequences, each consisting of a homodimeric or heterodimeric receptor chain or ligand, with ligand-receptor binding activity, bound directly or via a peptide linker to a subunit of a heterodimeric protein hormone capable of forming a heterodimer with the hormone's other subunits. The fusion protein, e.g. the thrombopoietin (TPO)/human chorionic gonadotrophin-alpha subunit (hCG-alpha) fusion protein denoted by the present sequence, significantly increases the biological activity of the hormone component, reducing the requirement for hormone itself and the number of injections needed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

Hybrid dimeric protein comprising two co-expressed units - (
hormone, especially FSH, for inducing follicular maturation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example; Pages 39-40; 60pp; English.

A novel fusion protein comprises 2 dimer forming co-expressed amino acid sequences, each consisting of a homodimeric or heterodimeric receptor chain or ligand, with ligand-receptor binding activity, bound directly or via a peptide linker to a subunit of a heterodimeric protein hormone capable of forming a heterodimer with the hormone's other subunits. The fusion protein, e.g. the thrombopoietin (PPO)/human chorionic gonadotrophin beta subunit (hCG-beta) fusion protein denoted by the present sequence, significantly increases the biological activity of the hormone component, reducing the requirement for hormone itself and the number of injections needed.

Sequence 336 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                  Tumour Necrosis Factor-Binding Protein from pTNF-BP15 cDNA. Tumour necrosis factor binding protein; TNF-BP; TNF-recepto pTNF-BP15; infectious disease; parasitic disease; cachexia; sutoimmune disease; shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TBP(20-190)/hCG-beta fusion protein. Fusion protein; thrombopoietin; TPO; beta subunit; hCG-beta.

PT a receptor peptide.

PS Example A: Page 53-54; 93pp; English.

CC Hybrid peptides for binding cytokines, comprising a malaria parasite CC (Plasmodium falciparum) peptide (capable of binding to a red blood CC cell (RBC)) and a receptor peptide are claimed. R70103-25 are examples CC of these hybrid peptides. R70107 is a fusion of tumour necrosis factor CC receptor (in accordance with H Loetscher et al Cell, Vol. 61, 351-359) CC and glycophorin binding protein (GBP) 130. The use of cytokine CC receptors not normally found on RBCs means that the cytokine can bind CC mannlessly to the RBC without deleterious effect. The RBC protects the CC hybrid peptides from excretion from the kidney, and due to steric CC hindrance prevents the cytokines binding to a receptor in another cell. CG BP 130 or GBPH (GBP homologue) are the prefd. malaria parasite peptides cused, others include EBA 175 (175 kba erythrocyte binding antigen), CC receptor molecule (eg. exhibited by plasmodium vivax). These peptides CC bind to pref. glycophorin A, B and C, sialo glycoproteins, found on CC the surface of fRBCs. The hybrid peptides are thus used to lower C the levels of free cytokines in the circulation to reduce pathological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        tumour treatment and to understand mechanismsm to TNF action Disclosure; Fig 1(1-3); Slpp; German.
Clone pTNF-BPI5 was used to contruct paDTNF-BP, for transfection of e.g. COS7 cells. The expressed proteins are useful prophylactically and therapeutically to control disorders which involve the damaging effects of TNF-alpha or beta (e.g. infectious or parasitic diseases, shock, cachexia, autoimmune diseases, adult respiratory distress syndrome etc., or side effects of treatment with TNG-alpha). They can also be used as diagnostic reagents for assaying TNF and in study of TNF-receptor interactions. See also Q06382-Q06285.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TNF-R-GBP 130 fusion protein.

TNF-R-GBP 130 fusion protein.

Hybrid peptide; malaria parasite; Plasmodium falciparum; fusion protein; red blood cell; cycokine receptor; glycophorin binding peptide 130; cnp 130; GBPH; glycophorin binding peptide homologue; glycophorin A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GBP 130; GBPH; glycop

                                                    PT New polypeptide capable of binding human TNF alpha - comprises first three cysteine-rich subdomains of TNF alpha receptor for treating autoimmune disease, septic shock, HIV etc.

PS Example; Fig 1: 43pp; English.

CC 7111 Sequence was deduced from human TNF-alpha cDNA isolated as in C24440. The first 35 amino acids are generally quite hydrophobic and probably represent a signal sequence. Residues 35-40 are highly charged (DREKR) and this is not normally found in secretory signal sequences. It is possible the receptor is processed by proteolysis after residue 40 which contains a dibasic cleavage site (KR). Hydropathy analysis of this sequence predicts a single transmembrane domain of 23 amino acids, dividing the sequence into an extracellular domain of 171 residues and a cytoplasmic domain of 221 residues. The sequence contains a large number of cysteine residues, the arrangement of which is similar to that of other cell surface proteins, suggesting the TNF-alpha receptor is structurally related to a family of receptors.

NOTE: - Residues 371,2 given in the sequence as T,L, are encoded by Sequence 455 AA;

PT antagonising deleverious carriers.

S Disclosure; Fig 1; 40pp; English.

C This sequence represents human p55 tumour necrosis factor (TNF-R).

C Expression of this receptor is regulated by shedding of the extracellular conditions of the receptor fragment. The p55 TNF-R can be shed in response to different conducting agents, e.g. phorbol myristate accetate (PMA), depending on cell conducting agents, e.g. phorbol myristate accetate (PMA), depending on cell conducting agents, e.g. phorbol myristate accetate (PMA), depending on cell conducting agents, e.g. phorbol myristate accetate (PMA), depending on cell conducting agents, e.g. phorbol myristate accetate (PMA), depending on cell conducting agents, e.g. phorbol myristate accetate (PMA), depending on cell conducting agents, e.g. phorbol myristate accetate (PMA), depending on cell conducting response is the spacer region (see R75012) in the extracellular conduction and links the Cys rich module to the transmembrane domain. The spacer region of the transmembrane domain. The conduction of the exceptor and substitutions consultations (R5013-25) and substitutions consultations (R75013-25) and substitutions consultations (R75013-25) and substitutions are consultations (R75013-25) and substitutions consultations (R75013-25) and substitutions are consultations (R75013-25) and substitutions (R

Disclosure; Fig 1; 25pp; English.
The amino acid sequence is that of tumour necrosis factor alpha
binding protein which contains the extracellular domain of human T
alpha receptor. It is soluble and can be used in the regulation of
TNF-mediated responses by binding and sequestering the cytokine. I
can therefore be used therapeutically to treat disorders such as
cachaxia, sepsis and autoimmune diseases, specifically rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    conformation of the protein adversely effect the shedding process. The mutations shown in R75013-47 were introduced in order to create an inhibitor of a protease that is capable of cleaving the soluble TNF-R from the cell bound TNF-R. Fragments of these inhibitors can be seen in R75017-9, R75025, R75033-5 and R75042-3. These protease inhibitors can be used for enhancing TNF function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tumour necrosis extracellular do

                                                                                                                                                                                     The linker may comprise 5-100 amino acids selected from Gly, Asp, Ser, Thr and Ala. These linkers separate the individual moeities by such a distance that each component of the fusion protien is capable of folding into the secondary or tertiary structure required for its biological activity. These fusion proteins may be used in therapy, diagnosis and assays for conditions mediated by TNF or IL-1, particularly in conditions in which both TNF and IL-1 play a causitive role. They may be used to treat cachexia, rheumatoid arthritis, diabetes, multiple sclerosis, pulmonary fibrosis and silicosis, cerebral malaria, allograft and xenograft rejection in graft verses
                                                                                                                                                                                                                                                                                                                                                                                New fusion protein tumour necrosis factor and human interleukin-1 receptor - useful in therapy, diagnosis and assays of e.g. rheumatoid arthritis, diabetes, cerebral malaria, sepsis, etc. Disclosure; Page 57-59; 85pp; English.

The sequences given in R42058-59 repressent human tumour necrosis factor receptor (TINF-R) and the sequences in R42060-61 represent human interleukin-1 receptor (IL-IR). These sequences were used the production of a fusion protein which conformed to one of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Tumour necrosis factor inhibitor - for suppression of TNF-alpl
and -beta, useful as therapeutic agent.
Disclosure; Fig 21; 142pp; English.
The sequence comprises the entire 30 kD TNF inhibitor. The cla
from which the sequence was deduced was isolated from a cDNA
library prepd. from RNA form U937 cells treated with PMA/PHA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The whole gene can be inserted into expression vectors for prepnof TNF inhibitor for use in the treatment of inflammatory and degenerative diseases. The active protein is claimed (Claim 8). See also R10984 and R11001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         16-JUL-1990; 058976.

Claim 1; Fig 1; 26pp; German.
Partial amino acid sequences were determined for the 55 and 75kD
TNF-BPs (see R11072-R11081) and oligonucleotide primers were
synthesised based on these partial sequences. The primers were used
to produce a cDNA fragment for use as aprobe to screen a human
placental cDNA bank constructed in lambda gtll. Positive clones were
identified and sequenced. DNA constructs comprising the TNF-BP coding
sequence may also contain a fragment encoding a human ig domain.
Recombinant constructs are used to transform cells to confer
improved TNF-binding properties.

PT a receptor peptide.

PS Example A; Page 54-55; 93pp; English.

CC Hybrid peptides for binding cytokines, comprising a malaria parasite CC (Plasmodium falciparum) peptide (capable of binding to a red blood CC (Plasmodium falciparum) peptide are claimed. R70103-25 are examples CC (Plasmodium falciparum) peptide are claimed. R70103-25 are examples CC cell (RBC)) and a receptor peptide are claimed. R70103-25 are examples CC of these hybrid peptides. R70108 is a fusion of tumour necrosis factor CC receptor (in accordance with H Loetscher et al Cell, Vol. 61, 351-359) CC and glycophorin binding protein (GBP) homologue (GBPH). The CC use of cytokine receptors not normally found on RBCs means that the CC cytokine can bind harmlessly to the RBC without deleterious effect. CC The RBC protects the hybrid peptides from excretion from the kidney, and CC due to steric hindrance prevents the cytokines binding to a receptor in CC another cell. GBP 130 or GBPH are the prefd. malaria parasite peptides cused, others include EBA 175 (175 kDa erythrocyte binding antigen), PMMSA 'New Amalaria parasite peptides cused, others include EBA 175 (175 kDa erythrocyte binding raceptor in the cytokines binding antigen), PMMSA 'New Amalaria parasite peptides cused, others include EBA 175 (175 kDa erythrocyte binding antigen), PMMSA 'New Amalaria parasite peptides cused, others include surface antigen) and the Duffy binding raceptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TNF-R-GBPH fusion protein.

Hybrid peptide; malaria parasite; Plasmodium falciparum; fusion protein; red blood cell; cytokine receptor; glycophorin binding peptide 130; GBP 130; GBPH; glycophorin binding peptide homologue; glycophorin A; tumour necrosis factor receptor; TNF-R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               harmlessly to the RBC without deleterious effect. The RBC protects the hybrid peptides from excretion from the kidney, and due to steric hindrance prevents the cytckines binding to a receptor in another cell. GBP 130 or GBPH (GBP homologue) are the prefd. malaria parasite peptide used, others include EBA 175 (175 kDa erythrocyte binding antigen), PMMSA (pre major merozoite surface antigen) and the Duffy binding receptor molecule (eg. exhibited by Plasmodium vivax). These peptides bind to pref. glycophorin A, B and C, sialo glycoproteins, found on the surface of RBCs. The hybrid peptides are thus used to lower the levels of free cytokines in the circulation to reduce pathological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 R70108

                                                                                                                                                                                                                DNA encoding TNF binding protein and TNF- receptor - used in tumour treatment and to understand mechanismsm to TNF action Disclosure; Fig 91(1-2); 51pp; German.

C IAMDGATNF-R8 (Q06584) was used to screen the HS913T cDNA library.

C LAMDGATNF-R2 encodes the complete human TNF-R2 and was used to construct a plasmid (pADTNF-R) expressing the product the same way as pADTNF-BP (see Q065282). The expressed proteins are useful prophylactically and therapeutically to control disorders which involve the damaging effects of TNF-alpha or -beta (e.g. infectious or parasitic diseases, shock, cachexia, autoimmune diseases, adult respiratory distress syndrome etc., or side effects of treatment with TNG-alpha). They can also be used as diagnostic reagents for assaying TNF and in study of TNF-receptor interactions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             molecule (eg. exhibited by Plasmodium vivax). These peptides bind pref. glycophorin A, B and C, sialo glycoproteins, found on the su of RBCs. The hybrid peptides are thus used to lower the levels of cytokines in the circulation to reduce pathological damage. Sequence 309 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human Tumour Necrosis Factor-Receptor from lambdaTNF-R2 cDNA insert. Tumour necrosis factor binding protein; TNF-BP; TNF-receptor; Infectious disease; parasitic disease; cachexia; autoimmune disease; shock; lambdaTNF-R2; raTNF-R8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21-APR-1989; DE-913101.

PI New hybrid peptide(s) for binding cytokine(s) - comprising a malaria parasite peptide capable of binding a red blood cell and PT malaria parasite peptide capable of binding a malaria parasite (c) PT malaria parasite peptides for binding cytokines, comprising a malaria parasite (C) Plasmodium falciparum) peptide (capable of binding to a red blood (c) cell (RBC)) and a receptor peptide are claimed. R70103-25 are examples (C) of these hybrid peptides. R70104 is a fusion of tumour necrosis factor receptor (in accordance with H Loetscher et al Cell, Vol. 61, 351-359) (c) and glycophorin binding protein (GBP) homologue (GBPH). The use of CC cytokine receptors not normally found on RBCs means that the CC cytokine receptors the hybrid peptides from excretion from the kidney, and CC used others include EBA 175 (175 kDa erythrocyte binding antigen), pMMSA (pre major merozoite surface antigen) and the Duffy binding receptor consecute (eg. exhibited by Plasmodium vivax). These peptides bind to C pref. glycophorin A, B and C, sialo glycoproteins, found on the surface cytokines in the circulation to reduce pathological damage.

*title Soluble forms of tumor necrosis factor receptors (TNF-Rs).
The CDNA for the type I TNF-R, cloned using amino acid sequence data of its soluble form, encodes both the cell surface and a soluble form of the receptor.
